To whom it may concern

Subject : Ethylene Oxide (ETO) in sesame seed

Since two years Dipasa has been analysing all their Mexican and South America sesame seed as well, this at special request of some of our customers.

After having a database of over 650 laboratory tests on South American and Mexican sesame seed where no ETO was found, we believe the time has come to stop testing on these origins .

Reviewing the above Dipasa guarantees that all their sesame seed deliveries to you are free of ETO .

In case you wish to continue that we supply you with analyses on ETO ,this can be done at cost.

Sincerely yours,

Dipasa Europe B.V.

Marcel Keizer

Managing Director
